Matvei Riabushkin

Software Development Engineer · Kotlin / Java · Moscow

matveyryabushkin@gmail.com | GitHub | @Keyko_Mi | +7 929 665-35-08

EDUCATION

HSE University, Faculty of Computer Science × Central University 2024 - 2028

Bachelor's in Information Product Design and Development Moscow

Third-year student; full-time joint programme.

PROFILE

Product-minded backend engineer with experience on an AI-native team at T-Bank. Own work from requirements and architecture through testing, release and operations. Advanced from grade 11 to grade 13 in the bank's internal assessment during a three-month internship.

EXPERIENCE

T-Bank Jun 2026 - Sep 2026

Backend Engineering Intern · Loyalty Platform Moscow

- Implemented incremental audience rescoring in ClickHouse for 10–50 million customers. In delta scenarios, estimated processing time fell from over a day to about an hour; changes to commercial terms no longer triggered ML rescoring.
- Moved a financial AI assistant's MCP prototype from demo data to personalised offers using on-demand API calls and PostgreSQL cache-aside. Reduced tool responses from 20–30% to 0.5–0.8% of the LLM context window at the same result limit.
- Designed and implemented SMB offer delivery through a unified catalogue, connecting backend services, Airflow and ClickHouse while eliminating duplicate offers.
- Built an AI skill to synchronise tests with Allure TestOps; published it on the internal marketplace, with adoption beyond the team. Set up autonomous agent E2E verification scenarios for two teams.
- Improved a Go LLM gateway's payload handling, SSE streaming, safe retries and cancellation. Added token and cost accounting, plus MCP error, latency and cache hit/miss metrics with a Grafana dashboard.

PROJECTS

Alamo *Agent harness for local models*

Building a runtime for autonomous, multi-step local LLM workflows: long-running sessions, handoff, smart context compaction and agent session delegation.

Mnema *AI learning platform*

Building an AI learning platform for any subject, combining ideas from Anki and Duolingo.

TECHNICAL SKILLS

Languages: Kotlin, Java, SQL, Python, Go, TypeScript

Backend & data: Spring Boot, WebFlux, REST, PostgreSQL, ClickHouse, Kafka, Airflow

AI & agents: MCP, RAG, agent harness, tools, hooks, skills, Codex, Claude Code

Delivery & quality: Kubernetes, CI/CD, JUnit, E2E, Allure TestOps, Grafana, Prometheus
