PROFILE

Product-minded backend engineer with experience on an AI-native team at T-Bank, from requirements and architecture to release and operations.

EXPERIENCE

T-Bank Jun 2026 - Sep 2026

Backend Engineering Intern · Loyalty Platform Moscow

- Implemented incremental ClickHouse audience rescoring for 10-50 million customers, reducing estimated delta-scenario processing from over a day to about an hour.
- Moved a financial AI assistant's MCP prototype to personalised offers and PostgreSQL cache-aside. Cut tool responses from 20-30% to 0.5-0.8% of the LLM context window at the same result limit.
- Designed SMB offer delivery through a unified catalogue across backend services, Airflow and ClickHouse, eliminating duplicate offers.
- Built an Allure TestOps AI skill adopted beyond the team and autonomous agent E2E checks for two teams. Improved a Go LLM gateway's SSE, retries, cancellation and token/cost accounting; added MCP metrics and Grafana.

Central University · T-Bank-supported summer practice Jul 2025

Java Backend Developer · Educational team project Moscow

- Built Spring Boot competition and team services; contributed to JWT/BFF integration, API contracts and a Docker Compose deployment on a VPS.

SELECTED PROJECTS

Mnema / *Learning platform for personal study materials*

- Immutable study-material revisions, seven exercise types and scheduled review. AI authoring and answer checks, usage budgets, OAuth 2.0/OIDC and S3 media storage.

AeroChat / *Self-hosted messenger, alpha*

- Direct and group chats, realtime delivery, attachments and audio calls. Go services, ConnectRPC, PostgreSQL and a React interface with a windowed desktop.

BPMN.Space / *AI assistant for business processes*

- Turns documents and voice notes into editable BPMN 2.0: clarifying questions with citations, source traceability, diagram versions and export.

yuzuru-skills / *Tooling across AI harnesses*

- Maintain skills, plugins, MCP tools, hooks and CLI helpers across agent harnesses; update adapters and documentation as provider APIs evolve.

Alamo / *Local Ollama model workbench, alpha*

- Model import and durable Chat Jobs with replay, cancellation and recovery; local attachments. TypeScript, Hono, React, SQLite and Zod REST/SSE contracts.

EDUCATION

HSE University, Faculty of Computer Science × Central University 2024 - 2028

Bachelor's in Information Product Design and Development

Third-year student; full-time joint programme.

Moscow School of Programmers 2019 - 2024

Software development programme · Supplementary education

Courses: algorithms and data structures, competitive programming preparation, UI/UX design.

IN-DEPTH KNOWLEDGE

Programming: Kotlin, Java, Python, C++, SQL

Backend: Spring Boot, WebFlux/MVC, Spring Security, JDBC/JPA, FastAPI, Django, SQLAlchemy, Alembic, Pydantic, gRPC, Protobuf, WebSocket, WebRTC

Data & analytics: PostgreSQL, ClickHouse, Redis, Kafka, NumPy, Pandas, SciPy, Matplotlib

Engineering: Docker/Compose, Linux, GitHub Actions, Nginx, S3/MinIO, OAuth 2.0/OIDC, PKCE, JWT, JUnit/Mockito, JaCoCo, Vitest

AI & agents: MCP, RAG, tools/hooks/skills, evals, Codex, Claude Code, Ollama, llama.cpp, whisper.cpp

APPLIED WITH AI ASSISTANCE

Development: Go, TypeScript/JavaScript, React, Angular, Vue, RxJS/NgRx, Zustand

Infrastructure & quality: Kubernetes/k3s, Airflow, Caddy, Testcontainers, Playwright, Allure TestOps, Grafana, Prometheus, OpenTelemetry

Media & messaging: FFmpeg, OCR/VLM, encrypted messaging

Languages: English C1; Spanish B1; Japanese A2
